## Titusville Morning Herald.

Titusville, Friday, April 20, 1906.

## LOCAL MATTERS.

**Accident for the Morning Herald.**  
 On Tuesday morning, April 18, the Morning Herald was damaged by a fire which broke out in the printing office. The fire was caused by a defective lamp and spread rapidly, destroying the printing press and other equipment. The loss was estimated at \$10,000. The Herald was not published for several days following the fire.

## THE FIRST PRIZE FIGHT IN THE OIL REGION.

LIVELY "SMILE" BETWEEN BEN. HOGAN AND JACK HOLLIDAY.

## SIX ROUNDS FOUGHT.

## THE "GREAT BELL" OF THE OIL REGION.

## HOGAN THE WINNER IN TWENTY MINUTES.

## CONTEST DECIDED BY A "FOUL BLOW."

## A prize-fight for a purse of \$500 and the championship of the oil region came off in the classic suburb of Pithole City, or rather Titusville, on Wednesday afternoon, between Benny Hogan, alias "Grass-apt," of Oil City, and Jack Holliday, alias the "Samson Post," of Pithole City.

## We know very little about the antecedents of these brutes, Hogan is a notorious "rough" from Oil City, and has been the terror of the inhabitants of that quiet little borough for some time past. He has not been considered much of a pugilist, and when the match was made with Holliday, the friends of the latter were very confident he could knock his antagonist out of time in fifteen minutes.

## Holliday hails from Rochester, New York. He first got his name into the papers by running a wheelbarrow from Rochester to Buffalo, a distance of about 90 miles, without stopping for food or water, a feat that no locomotive has ever accomplished. He is a literal descendant of the "Game Chicken," an English lighter who flourished about twenty years ago, and was immortalized by Charles Dickens in his celebrated novel of Don Quixote.

## Holliday was backed principally by the Philadelphians, and Hogan by the denizens of Oil City. The feeling between the rival boroughs runs very high on the merits of their respective champions, and although the purse was but \$500, a considerable amount of money changed hands on the result.

## The fight came off at 2 o'clock p. m., near a piece of woods about one mile and a half from Titusville.

## The fighting-ring was about thirty feet in diameter, the center being four feet high. Hogan and Holliday were standing on the ground, and as soon as the rings were formed they retired and dressed for the contest. While this was going on, the masters of ceremony were selected—including umpires, referee, ringkeepers, and seconds. We have not been furnished with the names, (a circumstance which we regret, for everybody connected with the exhibition ought to be arrested and jailed.)

## There were 1,000 spectators, including a good many Titusvillians. The admission to the outside ring was two dollars per head, and the receipts are said to have fully covered the amount of the fighting stakes.

## The seconds were supplied with three rings, of steel, coated with oil, and as a fall out, self-regulating and self-protecting. It can be applied to engines of any form or size, is safe from explosion, and can be easily operated by a boy twelve years of age. The perfection of such an invention is obviously of great importance, and must work an entire revolution of the ordinary heating process. It at once opens a new market for the consumption of the great staple, and wherever introduced must supersede every other method of obtaining artificial heat.

## Petroleum as fuel has been fully tested in comparison with coal, by a board of engineers appointed by Secretary Welles, for its application to steam and steam engines. They reported that with an equal weight of oil a steam engine would be enabled to keep at sea three times longer than with coal, and that a freight steamer would save \$15,000 on each crossing of the Atlantic.

## It is estimated that there are 10,000 working engines in Western Pennsylvania, using one ton of coal (or its equivalent in wood) every twenty-four hours. There are two thousand small power engines from one to twelve barrels, lying idle, because they do not pay running expenses. With this fuel-saving application all could resume operations at a profit.

## Given this it requires thirty tons of coal to put down a well, more than twice its cost would be saved in drilling alone by the new heating process.

## Its general use in oil engines would also obviate the danger of fires, resulting so frequently in the oil regions from the substitution of gas and petroleum for fuel by an imperfect process; and insurance companies, it is said, have offered to take half the present rates whenever the new method is introduced. In foundries, rolling mills, factories, steamboats, and in short, all places where steam power is required or a large amount of heat wanted, this new fuel-saving invention may be successfully introduced.

## A company has been organized for the purpose of working this patent, and Mr. W. B. Todd, the general agent, is stopping at the Merchants Hotel in this city. Following the apparatus is only \$25. License or permits for its use are sold in the same connection, which secures a perpetual right to the purchaser.

## NEWSPAPER ENTERPRISE.—The Pittsburgh Commercial telegraphed to the manager of the W. U. line here for a special report of the fire on Wednesday morning. Mr. E. L. Armstrong, the night operator, complied by sending our report of the disaster, so that it appeared in print simultaneously in Pittsburgh and Titusville. The dispatch contained one thousand six hundred words, and occupied one hour and a half in transmission. Mr. Armstrong is a rapid operator and the Commercial is an enterprising journal, but it would have been more creditable to the editor, in a professional sense, if he had acknowledged the source of his information, as he agreed to do.

## HARPER FOR MAY.—H. H. Hurd &amp; Co. of the Postoffice news department have handed us Harper's for May. The illustrated articles are: Galena and its Lead Mines; The Yosemite Valley; Lightning's last African Expedition. The remaining articles are: The Flag that Talks; Armistice; Tom Ladd; Marriage in a Modest; The American People Stared and Frowned; Queen's Good Work; Kate; Voices of the Night; Longwood; The Easy Chair, Drawer, and Monthly Record are unusually interesting.

## NO OBSESSION.—Our commercial reporter, Mr. Ponton, is in receipt of an interesting communication from a gentleman who is boring for China, at Bethel, O. W., which concludes as follows:

"My dear Ponton:—Would you have any objection to lending me the money, but it is temporarily locked up in theoretical 'pipes' for sending oil to Shanghai."

Mr. Ponton replies that he has no objection to lending the money, but it is temporarily locked up in theoretical 'pipes' for sending oil to Shanghai."

## pastime in America, and our people are the best of warriors, in a good cause. Physical training is among the most refreshing of them, and therefore in the brutal drama of Wednesday ought to be promptly arrested, tried under the criminal code, and made to expiate their offenses by doing the State some service "in its penalitaries."

## Seventh Chapter of Chronicles.

## Now when it became noised abroad that the king had done all these things, the people with one accord made haste to put their greenbacks and their shillings, their postage currency and their German silver into the treasury. The old and the young, the rich and the poor, the blind and the lame, were all of one mind, and so woe all these things were done, the towers were well filled, and the king and his chamberlains said one to another: Behold what great love the people have shown us.

## 2. Then the king commanded that the hewers gather themselves together and go into the mountains and hew timber for the building up of the great city of Rhio.

## 3. And also workers in stone, and workers in iron and cunning workers in brass, together with artificers in wood, and that could cold-rotate, and they were all commanded to labor for the building up of the great city.

## 4. And there came laborers from all the country round about—workmen in iron and brass, and they made iron horses that galloped fast and smoke from their nostrils, and they were of prodigious strength and terrible to look upon, and the king was well pleased with all these things, and he commanded that these men all should receive 500 pennies a day.

## 5. And it came to pass that the people round about were to assemble together in council, for great matters were to be brought forward for their deliberation.

## 6. And the king said one to another, who amongst us shall stand up to this great gathering of the wise men of the nation; and they were sorely puzzled, for they said we cannot send the king, for we must have him continually to Reigob-ho-ver us.

## 7. And the people were in a great straight, one they desired to cast lots.

## 8. And when the king heard these things he was pained in his heart, and he said to himself, Lo, I will serve them in this, as well as in everything, and he commanded his scribes to make it known to the people; so they were filled with great joy, and shouted with one accord, Long live the King of Rhio.

## CHAPTER THE EIGHTH (AND LAST).

## 1. And in those days the king of Rhio dreamt a dream, and behold he stood upon an island, and upon each side thereof ran a

**TO OIL MEN.**  
**CARVER'S**  
**DOUBLE ACTING**  
**OIL PUMP.**

This pump consists of two barrels, one within the other, and each having its separate valves and acting independently of the other. The action is

**DOUBLE,**  
and as much oil is raised at the

**DOWNWARD**  
as at the

**UPWARD STROKE.**  
THE DOUBLE SET OF VALVES

allows the FREE ESCAPE of gas through one of the either of the barrels, without affecting the pumping and thus enables the pump to work without obstruction in wells where the common pump cannot be worked at

AN IMPROVED FUSION

of double the strength of the old one has been invented which will be supplied FREE to all parties using the old sliding valve in three pumps. These pumps have now been used in the State of New York for over 20 years below a cent of the certificate we have received, and make a careful perusal of the same.

## TRANSPORTATION.

### EMPIRE LINE.

#### THE EMPIRE TRANSPORTATION COMPANY

Now offers to the business community a RELIABLE  
Fast Freight Line between the EAST and THE WEST,  
and the

#### GREAT OIL REGION OF PENNSYLVANIA.

It covers and controls all the cars of the line, which are new and built especially for the trade, and furnished with BROAD TREAD TIRES, which enable it to run through irrespective of change of gauge, unobstructed.

It is the petroleum line as regards its transshipping points. Its line is manned by men of long experience in this class, and its effort will be aimed on their part to render the convenience to the customer.

Parties ordering goods from the East will please direct Shipments to MARK LEONARD, EMPIRE LINE, and, for them, to the Office of the Company for shipping directions etc.

Parties who wish goods to be forwarded, call to New York, 114 Broadway, and Baltimore.

For rates of freight, at shipping points, etc., apply to the General Office, 114 Broadway, New York.

J. McCAUGHLIN, Agent, Timonium, Md.

ROBERT W. SMITH, Eastern Superintendent, Wm. Thompson.

INDU T. HOUSTON, General Freight Agent, Philadelphia.

### KANSAS.
